Tilgin is a leading technology company focused on customer premises equipment (CPE) for the Triple Play market; IP set-top boxes, IP residential gateways and associated management applications. As such, we deliver solutions for not only advanced video streaming but also voice. We also solve the complex service quality and provisioning issues that arise when a single broadband connection is used for all types of communication and entertainment services.

Tilgin looks at CPE from a network perspective and end-to-end. Consequently, our products are all centrally managed and auto-provisioned, without involvement from the subscriber. Besides saving you operational headaches and costs, this also enables you to offer new services for voice, video and data “ incrementally “ over the lifetime of the product. Further, we work closely with leading ecosystem and system integrator partners to deliver products that are easily integrated into total solutions.

Vood 322

\$65.00

Vood 322 IP Residential Gateway (2FXS / 3Ethernet LAN) is designed to connect to an existing broadband modem. Vood 300 products meet the challenges of providing carrier-grade VoIP when broadband connectivity is separately provided. [\[Product Details...\]](#)
